Getting Started The first step in Photoshop is to create a new document. When starting to create your first image in Photoshop, create a canvas with 300 pixels on the width and 300 pixels on the height. Use a white background color for the canvas, and leave the default Photoshop settings in the top right corner, which are Preset: Document Settings. Using the Layers Panel Photoshop uses a layer-based editing system, which enables you to break images into multiple overlays in the form of layers. You can create new layers by simply clicking on the New Layer icon (Layer on the left side of the Layers panel). Each new layer has the same options available as any other layer in Photoshop. Photoshop CS6 adds some new options such as the help panel, which tells you what each tool and command does. To the right of the layer thumbnail, there is a checkbox that enables you to check and uncheck which layers are displayed in the panel on the left. The left panel is divided into the following tabs: Opacity Overlays The Overlays panel is a great tool for controlling the visibility of an image in Photoshop. Most often you will use this tool to hide or delete an image, but other features such as the New Layer and others also fit into this panel. Click on the Overlays panel to open this menu. Clicking on the Pencil icon enables you to draw a new shape. You can also add an image to the canvas by clicking on the Insert Clipart icon (shapes in the tray

A number of programs combine Photoshop's ability to edit and create images in-depth with elements like a drawing tool or a watermark tool.
