Add-on applications Add-on applications are software applications written to extend the functionality of AutoCAD. These are for the creation of technical drawings, diagrams, designs and 3D modeling. The process of using an add-on is called hooking, for example an add-on can be designed to enable the creation of a feature that will not be displayed on the screen but rather will be used in some other way. Add-on applications are stored as binary files (.APP extension) which the AutoCAD software can read to extend its functionality. The file is either installed by the user or automatically on start-up by the AutoCAD software. The user has a choice of which files to install, and to which folder or directory they should be installed in. An installation of an add-on might require some configuration to be performed by the user, or may require access to the Internet to download information about the add-on and to make it work. Add-ons are not included with AutoCAD. These can be distributed through the Autodesk Exchange program. The add-on is either installed by the user or automatically on start-up by the AutoCAD software.
