Add a new profile: In Name, type your username. For example: autocad-user. In Protocol, select the type of the connection: "VPN", "PPTP", "WIFI" or "None" (Your network connection protocol). If "PPTP" is chosen, you have to configure your PPTP client: Open the connection settings of your PPTP client. Enter the IP address and the username and password of your router. Click "Open". What's New In AutoCAD?

AutoCAD 2023 supports importing many file types, including Adobe PDFs, and will mark up imported drawings with the same notes, comments and other markings found on your paper drawings. Use Markup Import to add comments to drawings, mark up color swatches and other details, and directly import these comments into your drawing. If your feedback in the form of feedback is as straightforward as a red mark, color, or number, AutoCAD will mark up your drawings with those annotations. As your feedback is more complex, you can choose to export the annotations as a new style to a library. This feature works well with Excel charts. You can import Excel charts in PDF format from Excel files or directly from Internet Explorer, and then use the same comments from the chart as you use for the paper drawing. For more information on importing from PDFs, see Import from PDFs. Plus, you can now import a virtual brush from an image file, which can be a screen shot or an illustration, to help you mark up the image. Use the same text markup as you used for the paper drawing, and AutoCAD will create new annotation types for you. Conversely, if you have a large PDF that you want to turn into a paper drawing, use Markup Assist to automatically convert your PDF to a PDF drawing. Drawing templates: Use the Drawing Templates tab to quickly and easily create drawings that have a consistent structure and look, with templates for basic lines and blocks, graphical elements, and other basic shapes. Newly added templates include: Basic Line: This template uses simple lines for dashed, dotted, and standard thickness lines. Curve Path: Curved lines can be superimposed on curves in many different ways. Use this template to set up your drawing using these curves. Basic Nodes: Get points for common geometric shapes like circles and ovals, and use them to quickly define new nodes. Grids: Use the Grid template to quickly lay out a drawing on a reference grid and then mark off squares or hexagons. Lines, Polylines, and Patterns: Standard lines are ideal for drawings where it's easier to mark off areas with line segments than circles. Use this template to add lines, and then use any of the Line templates to add lines in various styles. You can also use the Polylines template to create numerous circles of different diameters and marks out the outlines
