11/16/12 Shadow Dragon Art Opening Trailer 11/16/12 Shadow Dragon Art Opening Movie 11/16/12 Shadow Dragon - The Game FINAL FANTASY IV: The After Years, also known as Final Fantasy IV (FFIV) outside Japan, is a role-playing video game developed and published by Squaresoft for the Nintendo Game Boy in 1990, and later released for the Super Nintendo Entertainment System, Nintendo Entertainment System, PC Engine/TurboGrafx-16, PlayStation, PlayStation 2 and PlayStation Portable. It is the second Final Fantasy game released in North America after Final Fantasy III. It has since sold over 3.5 million copies worldwide. The game was one of the first in the series to require the Super Nintendo Entertainment System for full functionality, along with Final Fantasy V, Final Fantasy VI, Final Fantasy VII, and Final Fantasy IX. The game takes place in the kingdom of Pulse to the east of the original setting. The main character, Cecil, is a boy who is trained to become a man-at-arms to protect the kingdom and defeat its enemies. The game is known for its rock-inspired soundtrack and large, colorful designs, which are heavily influenced by Square's previous game, Dragon Quest. The game's battle system and overall gameplay is similar to Final Fantasy II. This is the third Final Fantasy game to feature a system known as "Pulse-Pulse Fusion", which allows the player to fuse different monster enemies to make stronger versions of themselves. Cecil can learn skills from various monsters and use them in battle, such as

letting himself and his allies gain a temporary HP boost or extending the duration of an attack. Unlike other Final Fantasy titles, such as Final Fantasy II and Final Fantasy V, which are widely regarded as the series' debut titles, FFIV is not named after a song, but rather after the name of a large square near the Sancristo Abbey in Italy. The mechanism of linkage to care for tuberculosis disease in South African communities at high risk for tuberculosis. Tuberculosis (TB) disease and infection are common in South African communities at high risk for TB, and in combination with a low prevalence of human immunodeficiency virus (HIV) infection, they contribute to a high number of incident TB cases each year. Lack of diagnostic services, especially for HIV-associated TB disease, hinders the control of TB in these communities. Linkage to care (LTC) provides timely access to TB diagnostics, treatment, and prevention. Increased rates of LTC are associated with the effectiveness of TB programmes. The question of how to increase LTC rates in communities at high risk for TB is important to the South African National Strategic Plan for TB (National TB Plan, 2007-2011). We conducted a review of published studies that examined LTC in South African communities at high risk for TB, with a focus on geographical, sociodemographic, and health system factors. We selected studies based on clear definition of and measurement of LTC, and the availability of geographical and sociodemographic information for at least one of the study communities. Studies of LTC in Mnsi and Tembisa in the Free State Province that met our criteria provided the basis for a review of the literature. The literature review identified six themes of potential LTC intervention strategies, including geographical factors, access to health services and human resources, use of existing services, use of health information systems, and community factors. Geographical factors included distance from health facilities and transport problems. Access to and quality of health services included human resources, availability of diagnostic services, quality of TB services, access to TB services, and patient pathways. Use
