Lauren Rappaport laurarappa laurarappagallery Lauren Rappaport has been a contributor to the Salon since 2011 and has published on culture, parenting, history and travel since she first began blogging. As an author, she is working on her first book. More From Lauren RappaportIn June, coal, gas and nuclear plants in Virginia joined wind and solar power plants in creating a massive energy surplus. Virginia exported 7.8 GW (gigawatts) of electricity in June, according to figures from the Virginia Electric Utility Association. That was more than the state produced -- 7.3 GW of electricity was generated in the state, and the state exported 6.5 GW. That exporting of electricity is the first time that has happened. The amount of electricity exported is equal to over 100.5 percent of the state's generation capacity. But most of that power was drawn from the grid, so Virginia and other states were pulling energy from nearby. Energy trade Virginia is one of 10 states which will be connected to other states through the Regional Transmission Organization PJM Interconnection, said Rick Capretto, CEO of the Virginia Energy Network. "It's like having a very large grid linking multiple states together," he said. "We now have 'baseload' power in our state because it's the first time our state has run a deficit." The state was running a deficit of capacity because it had a surplus of generation, Capretto said. When the state saw the surplus, it was able to start exporting the power to the states outside of Virginia. The surplus power is ultimately paid for by ratepayers in states where c6a93da74d
