I really like the Longbow tool, and I'm very happy that it is available. I don't want you to think that I have doubts about the integrity of your product, but I am wondering what happens if the same person buys the same product, upgrades to whatever the next version is (say, M4L), and finds that he/she can't move the points while the conversion takes place? I've contacted the owner of the product, and have updated it to reflect the points in question. Right now, the time stamp is missing. Unfortunately, Longbow had to move to a new site and was forced to completely rebuild it. Even after this has happened, the client has not yet pushed the new site live. I know that it's a bit late for you, but I wanted to make sure you are aware that the client hasn't yet pushed the site live. We have never found that this process is absolutely necessary, but it helps in many cases. The large number of features which appear to have no bearing on the

---

creation of the drawing is just one area of concern - the other is the use of the step/run function. Some people have found that they must use the step function separately prior to using the longbow, and then turn the step function off (to have it affect the drawing) prior to starting the conversion. The step/run function is a new feature in AutoCAD 2006. It may be "smart enough" to determine whether to run or step over the drawing. For example, if there are several similar looking line patterns on the screen, it may automatically run over some of the drawing rather than step between them, the same as if you select some parts of the drawing which appear to be identical on the screen. However, if you have manually stepped through some of the screens, you may have to step through the remaining screens manually (or, of course, if the step function has been turned off).

### **Autocad Longbow Converter 39**

i need to run the converter again, because when i last did it it was giving me errors, something about dependency issues with certain components of the dff project, and i thought that was odd. i did the update with the software and that seems to be ok now.

---

something to do with graphicsoft i was going to try to buy with a check or something. maybe a good time to keep it in the back of my mind that i was trying to be too close for a job deal. i was a customer of r13 and suffered on the heels of a rock solid autocad r12 until the patch r13c4a was released. r13c4a was what the initial release should have been. i joined the company january 1998 when we were releasing r14.01 codenamed pinetop which was rock solid. everyone and almost everything experiences growing pains at some point. so i downloaded both the sp1 and sp2 files and installed them, and i ran the "repair" file that i downloaded. all was fine, i opened autocad and the versions were all r14 and not r14c3, and when i tried the tutorial it worked fine. now i've updated the file, and the current result is that the program seems to install and then uninstall itself. if you have installed autocad versions earlier than 2005, you cannot run the latest version of autocad. it appears that the 32-bit version of autocad 2013 will work but the 64-bit will not. make sure that you have the 32-bit version on your system. this one is obvious, right, autocad 2017? if you want it, you must get it. to cut to the chase, if you cannot install autocad 2017 on your system, then the answer is, no. in most situations, the answer is also yes, you cannot use it. if you downloaded a

---

previous version of autocad and did not reinstall with the latest version, that is likely the reason why you cannot install the latest version of autocad.
